Question 4

1) Create a rule that automatically assign a bug to a developer when the priority set to highest
2) Write a query to find all unresolved bugs in a specific project assign to a specific user . Example->project=P1 and issuetype=bug and status!=done and assignee=current user

First, create an automation rule from scratch in Jira. Select the trigger as “When work item is created.” Then add a condition where the issue type is equal to Bug.

Next, add an action to edit the work item and set the priority to Highest. After that, choose the assign action and assign the issue to Venkateswara Rao Bhimasingi. Finally, save the rule.

Now, for the JQL query, first filter by project. Then apply the conditions where the issue type is Bug, the status is not Done, and the assignee is Venkateswara Rao Bhimasingi.

The JQL query will be:

project = VEEV AND issuetype = Bug AND status != Done AND assignee = "Venkateswara Rao Bhimasingi"

This query will display all unresolved bug issues assigned to the specified user in the given project.
